

Inventory and Stock Management Flow

1. Net Weight Based Stock Transfer:

- All stock transfer calculations will be based on:

Net Weight = Gross Weight – Bag Weight

- Only Net Weight will be considered as actual Soyabean stock quantity for inventory and transfer operations.

Example:

Gross Weight = 10,500 KG

Bag Weight = 500 KG

Net Weight = 10,000 KG

- ✓ Actual Transfer Stock = 10,000 KG

2. Multiple Stock Transfer Operations:

- The system will support multiple operational transfer flows such as:
 - Vendor → Vendor
 - Vendor → Plant
 - Vendor → Godown
 - Godown → Plant
 - Godown → Vendor
- Stock transfer can happen based on operational requirements anytime.

Flow:

Select Transfer Type → Select Source Location → Select Destination → Select Stock/Thappi → Dispatch Transfer

3. Kaltani Bag Inventory Tracking:

- The system will record all bag types during stock operations:
 - Kaltani Bags
 - Plastic Bags
 - Jute Bags
 - Local Bags
- However:
Only Kaltani Bags will affect inventory stock calculations.
- Other bag types will only be maintained for operational reference and truck breakdown reports.

Example:

Vendor Current Kaltani Stock = 200 Bags

Dispatch:

- 120 Kaltani Bags
- 40 Plastic Bags

Updated Vendor Kaltani Stock:

$$200 - 120 = 80 \text{ Bags}$$

Plastic bags will be recorded but will not affect inventory.

4. Thappi-Wise Stock Management:

- The system will support Thappi-wise (Stack-wise) inventory handling.

Each thappi can contain:

- Bag Count
- Weight
- Moisture %
- FM %
- Damage %
- Bag Type Breakdown
- Thappi Image
- Current Location

- Operators can transfer:

- ✓ Full Stock
- ✓ Single Thappi
- ✓ Multiple Thappis

instead of transferring only total stock quantity.

Example:

Thappi 1:

- 36 Kaltani Bags
- Weight = 2,500 KG
- Moisture = 8.9%

Thappi 2:

- 40 Plastic Bags
- Weight = 2,800 KG

Operator can select:

- ✓ Only Thappi 1 for dispatch.

5. GPS Location Capture During Transfer:

- Similar to the current billing flow, the system will capture live GPS location during:
 - Dispatch Transfer
 - Receive Confirmation
- The following details will be captured automatically:
 - Latitude
 - Longitude
 - Live Location
 - Date & Time
 - Operator Details

Dispatch Flow:

Create Transfer → Capture Dispatch Location → Generate PDF → Dispatch Stock

Receive Flow:

Receive Stock → Capture Receive Location → Verify Quantity → Confirm Receive

6. Transfer Verification & PDF Generation:

- Whenever stock transfer happens, the system will automatically generate PDF documents for:
 - Dispatch Proof
 - Receive Verification
 - Audit Tracking

Dispatch PDF Contains:

- Transfer Number
- Vehicle Details
- Driver Details
- Source & Destination
- Soyabean Quantity
- Bag Breakdown
- Kaltani Bag Count
- Thappi Details
- QC Details
- GPS Location
- Dispatch Time
- Uploaded Images
- Operator Details

Receive Verification PDF Contains:

- Received Quantity
- Received Bags
- Difference/Shortage
- GPS Verification
- Receiver Details
- Final Status

This helps maintain proper transfer verification and operational proof tracking.

7. Difference / Shortage Tracking:

- The system will automatically compare:
 - Dispatch Quantity vs Received Quantity
 - Dispatch Bags vs Received Bags

to identify shortages or operational differences.

Example:

Dispatch:

- 8,000 KG Soyabean
- 100 Kaltani Bags

Received:

- 7,920 KG Soyabean
- 98 Kaltani Bags

Difference:

- Weight Shortage = 80 KG
- Missing Bags = 2

This helps track:

- ✓ Transit shortage
- ✓ Bag loss
- ✓ Operational mismatch
- ✓ Transport damage

8. Location-Wise Stock Reports:

- Location-wise stock reports will be generated automatically based on:
 - Purchase Entries
 - Transfer Entries
 - Receive Entries
 - Thappi Movement
 - Bag Inventory

- Reports will be available for:
 - Vendor Locations
 - Godowns
 - Plant
 - Thappi-wise Stock

Example:

Vendor A Current Stock:

- Soyabean = 25,000 KG
- Kaltani Bags = 320

Vendor transfers:

- 8,000 KG Soyabean
- 100 Kaltani Bags

to:

- ✓ Murud Godown

After receive confirmation:

Vendor Stock:

- Soyabean = 17,000 KG
- Kaltani Bags = 220

Murud Godown Stock:

- Soyabean = 8,000 KG
- Kaltani Bags = 100

Reports will update automatically in real time.

9. Admin Control for Godown Creation:

- Godown creation rights will remain only with Admin users.
- Vendor or operational users will not have permission to:
 - Create Godown

- Modify Godown
- Delete Godown

Flow:

Admin Panel → Godown Management → Create Godown → Save

This helps maintain:

- ✓ Centralized control
- ✓ Proper stock mapping
- ✓ Security & authorization
- ✓ Prevention of unauthorized Godown creation

10. Fast & User-Friendly Operational Flow:

- The complete system is designed to reduce operational time and improve user experience.

Key Operational Features:

- Quick Transfer Process
 - Auto Weight Calculation
 - Quick Thappi Selection
 - One-Click GPS Capture
 - Automatic PDF Generation
 - Real-Time Inventory Update
 - Minimal Manual Entry
 - Fast Daily Operations
- Dropdown selections and auto-filled operational data will help reduce repetitive manual work.
 - All operational flows will remain simple, fast, and user-friendly for smooth daily procurement and transfer activities.

This Inventory and Stock Management Flow will help maintain proper stock movement tracking, Kaltani bag circulation, transfer verification, thappi-wise inventory handling, GPS-based operational proof, shortage tracking, and real-time location-wise inventory visibility while keeping the process simple, fast, secure, and user-friendly for daily operations.
